

LTCH CARE Data Set

Automate the LTCH CARE Data Set with HCS Interactant

Benchmark reporting feature includes statistics of assessments, pressure ulcer totals and percentages, and new and worsening wounds. View and compare your location against other facilities in your state based on bed size and free standing vs. Hospital-in-Hospital (HIH) facility type.

Web-based Software-as-a-Service (SaaS) Solution

HCS offers a complete web-based solution that enables Long-Term Acute Care Hospitals (LTCH) to complete the LTCH CARE Data Set as required by CMS under the Long-Term Care Hospital Quality Reporting Program mandate. The LTCH CARE Data Set is designed to be used as a stand-alone component and can also be embedded within the HCS Interactant Revenue Cycle and EMR Modules.

Experience with CMS Item Sets for Post-Acute Providers

HCS currently automates and submits CMS item sets including the Minimum Data Set (MDS) for our Skilled Nursing providers. Our experience with CMS reporting provides us with the confidence and ability to react quickly to last minute changes, and the foresight to program an intuitive application to ease staff burden and ensure compliance.

HCS is a proud Advocate Partner of NALTH.

- Data populated from EMR
- Comprehensive assessment scheduling
- Interrupted stay logic & data integrity edits
- Work list function to triage assessments due
- Alerts for assessment completion & submission compliance
- Tailored training based on facility/corporation needs
- Detailed reporting for Quality Assurance Programs
- Trending alerts for significant changes
- Access to subject matter experts
- Benchmark reporting
