

HCS Interactant[®] Revenue Cycle Module

Improve Cash Flow, Reduce A/R Days, and Streamline Workflows

Interactant Revenue Cycle Management (RCM) is a complete, end-to-end solution that simplifies the complex and time-consuming process of billing and tracking reimbursement for services provided. The Interactant RCM features a built-in “rules engine” that calculates net revenue and maintains payor-specific rules that will increase the accuracy and produce clean claims more timely.

Interactant RCM helps providers eliminate errors and increase cash flow by identifying underpayments, decreasing denials, and generating clean claims.

Bill with Greater Accuracy and Collect Payments Faster

Interactant RCM helps automate and manage business processes across the entire platform that pertain to reimbursement including referral management, census, and EMR functions. Interactant RCM is powerful enough to handle the most challenging and complex billing requirements and contracts. From Medicare to Medicaid, to the most complex payors, Interactant RCM's contract management and rules engine allows you to define payor-specific variables and rates, regulations, edits, codes, form types, billing specifications, and reimbursement terms. Your staff enters contract variables once, submits claims, and works only on the exceptions. Payor rates are maintained at the charge level, which allows for real-time visibility into net revenue value.

Overall, you'll reduce your operational costs, avoid missing charges, reduce billing errors, decrease A/R days, and increase total revenue with Interactant RCM.

Benefits

- ✓ Reduce A/R days
- ✓ Decrease bad debt
- ✓ Increase cash flow
- ✓ Decrease collection costs
- ✓ Improve clean claim rates
- ✓ Fully integrated with other Interactant modules

Interactant RCM's Streamlined and Automated Workflow includes:

- ✓ Bills activity for each payor source based on contract terms
- ✓ Releases bills automatically based on organization-defined criteria
- ✓ Prompts users for invalid or missing information
- ✓ Generates alerts for a variety of required activity throughout the billing cycle
- ✓ Automatically adjusts revenue statistics and rebills as necessary for retroactive payor or patient demographic changes

Components of Revenue Cycle Include:

- | | | |
|-----------------------|-----------------------|-----------------------|
| ✓ Referral Management | ✓ Billing | ✓ Contract Management |
| ✓ Practice Management | ✓ Trust Accounting | ✓ Scheduling |
